WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two flat bars 50 x 8 mm, 365 long, square ends.
Hole: 26 mm, centred on the bar width, 320 up from the bottom end.
Drill the two bars clamped together so the holes line up.
Fit: each bar stands against the inside face of a bearer, its bottom end flush with the bearer bottom, its centre 130 in front of the axle centre line (back edge 275 in front of the rear cross member).
Weld along both edges where it touches the bearer.
Check: a 25 mm bar slides through both holes at once and is level.
