WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Hub: 50 x 50 mm block, 38 thick, bored and slotted to clamp on the pump's handle socket with two M10 bolts (fit it to the pump bought).

Lever: 33.7 x 2.6 mm tube 585 long, welded on top of the hub.

T-bar: 27 x 2.3 mm tube 400 long, welded across the lever top, square to the pump shaft, 610 above the shaft centre.

Grips: 100 mm rubber grips on both T-bar ends.

Fit: the lever stands upright at mid-stroke and swings 40 deg each way. Two people face each other across the T-bar.

Check: at both ends of the swing the grip is at least 50 from the wheels and 30 from the frame.
